

FALCOULTIMO

The FalcoUltimo litter bin's design is fresh and functional and has been developed in association with the KVD Bureau in Amsterdam, Holland, their experiences and observations have influenced the shape and operation of the litter bin.

It's slim line profile is ideal in a world where the minimising of 'street clutter' and ease of movement on our streets is becoming a necessity.

For ease of emptying by the operator, the bin liner/body has functional decorative banding that are used as aids to help grasp it in the lifting and emptying process.

Capacity is approximately 55 litres.
